**You can't control the market,  
but you can control your decisions.**

Sometimes the market reacts poorly to changes in the world. But just because the market reacts doesn't mean you should. Still, if current events are making you feel uncertain about your finances, you should schedule a complimentary portfolio review. That way, you can help ensure you're in control of where you want to go and how you can potentially get there. Take control. Schedule your portfolio review today.

\* Your approved credit is not a commitment to loan funds. It is based on the value of your Investment account which could change daily. The amount you may be eligible to borrow may differ from your approved credit. Borrowing against securities has its risks and is not appropriate for everyone. If the value of your collateral declines, you may be required to deposit cash or additional securities, or the securities in your account may be sold to meet the margin call. The interest rate will vary depending on the amount borrowed and will begin to accrue from the date of the loan and be charged to the account. A minimum account value is required if you have loan features on your account. Call your financial advisor today.

## Why Do Investors Care about the Dollar?

For most people, the value of the dollar isn't how many euros or yen it equals - it's what goods and services a dollar can buy at the store. When prices rise, effectively reducing the value of the dollars we spend, we call it inflation. For investors focused on retirement, typical goals may include having enough money to live comfortably and leaving an inheritance. But even low inflation rates erode the value of a dollar over time. This is why we suggest owning investments that have the potential for rising income to help afford rising prices.

But a falling dollar doesn't usually result in higher inflation. Certainly, foreign travel and imported wines become more expensive, for example, but they're not big items in most budgets. More importantly, people tend to switch to alternatives rather than pay higher prices. In our view, the rise or fall of the dollar over time isn't likely to be a significant source of higher inflation.

### The Ups and Downs of the Dollar

Most people pay little attention to the changing value of the dollar in foreign currencies, and in the short term it's nearly impossible to predict. But the dollar's decline over the past decade has raised concerns. When it comes to your investments, we believe the changing value of the dollar can matter in three main ways:

- The value of the international investments you own tends to benefit when the dollar declines.
- U.S. company earnings can be helped or hurt, depending on the business.
- Oil and other commodity prices tend to rise when the dollar declines, since many are priced in dollars.

Fortunately, you don't need to be a currency expert or even understand all of the reasons why the dollar's value changes to build a portfolio that's prepared for the varying value of the dollar.

### Don't Let Currency Cloud Your Conviction

The value of the dollar in foreign currencies has always fluctuated, sometimes widely. As a result, we don't believe you should base your investment decisions on what you think the dollar will do. Talk with your financial advisor about ways to help position your portfolio for the changing value of the dollar.

Past performance does not guarantee future results. Diversification does not guarantee a profit or protect against loss. Special risks are inherent to international investing, including those related to currency fluctuations and foreign political and economic events. Investors should make investment decisions based on their unique investment objectives, risk tolerance and financial situation.
